Course Title: Calculus/Analytic Geometry I (CT) Course Number: MTH 229 -- Section 101 -- CRN 3046 -- Credit: 5 Hours Textbook: Calculus, Early Transcendental by Rogawski and Adams, Third Edition **Sections Covered:** 1.1-1.6, 2.1-2.9, 3.1-3.10, 4.1-4.8, 5.1-5.5, 5.7 Course An introduction to analytic geometry. Limits, derivatives, and integrals of the elementaryfunctions, functions of one variable, including the transcendental **Description:** functions. Calculator: TI-83 or higher, graphing calculators may not be allowed for some problems in This course fulfills a Core I CT requirement (Mathematical & Abstract Thinking, **Core Credits** Information and Technical Literacy, and Oral, Written, and Visual Communication) and a Core II Math requirement. ACT Math 27 or SAT Math 610 or MTH 132 "C" or higher **Prerequisites:** MTWRF: 10:00 – 10:50 AM **Meeting Time:** Classroom: SH 511 **Instructor:** Dr. Basant Karna Smith Hall 715 Office: **Office Hours:** 9:00-10:00 AM MTWRF, 11:00-11:30 AM TR, others by appointment Phone/Email: Phone: (304) 696-4332. Email: karna@marshall.edu Webpage: http://www.science.marshall.edu/karna/ Course Goals 1. To give students an understanding of the fundamental concepts of calculus and an appreciation of its many applications. 2. To develop critical thinking skills by asking students to convert real-world problems into forms suitable for calculus, and interpret the results of calculus in real-world problems. 3. To provide students with a deeper understanding of the mathematics that is used in their science and engineering courses. 4. To develop facility in using graphing calculators to solve mathematics problems. 5. To satisfy program requirements. 1. Students should be able to evaluate limits, derivatives, and integrals Course **Objectives:** symbolically. 2. Students should be able to approximate limits, derivatives, and definite integrals from tabular and graphical data. 3. Students should be familiar with the definitions of limits, derivatives, and integrals; be able to apply these definitions to test properties of these concepts; and be able to produce verbal arguments and examples showing that basic properties hold or do not hold. 4. Students should be able to apply the techniques of calculus to answer questions about the analytic geometry of functions, including vertical and horizontal asymptotes, tangent lines, local extrema, and global extrema. 5. Students should be able to verbally explain the meaning of limits, derivatives, and integrals in their own words, both in general terms and in the context of specific problems.

Course Student Learning Outcomes		How student achievement of each outcome will be assessed
Students will have an understanding of the fundamental concepts of		Homework, Board work,
calculus and an appreciation of its many applications.		Quizzes, exams and final
Develop critical thinking skills by asking students to convert real-		Homework, Board work,
	forms suitable for calculus, and interpret the	Quizzes, exams and final
