- Phy.202 §207 (CRN 5429) 2018 Spring Syllabus (Physics I Lab)
- Course-Section Web Site: www.science.marshall.edu/foltzc/p20218s.htm
- <u>Class meets</u> \_\_\_\_F 2pm-3:50pm in So.Chas TPB 740 , from Jan.12 Apr.27 (Exam 2) Attendance at each lab meeting is required; you must do the lab work before reporting on it! Make-up Lab opportunities might occur sporadically, in Huntington (Sci.100 email notices) Exam 2 will occur during Dead Week on Apr.27, regular time
- Instructor: Dr. Curt Foltz; Science 159; foltzc@marshall.edu; (304) 696-2519 office hours: M\_W\_F 9:30-11:30; \_T\_R\_ 11:30-12:30 and 1:30pm-2:30pm best method to contact me is email!
- <u>Catalog Course Description:</u> PHY 202 General Physics Laboratory. 1 hr Laboratory to accompany Phy 201 or Phy 211, focusing on mechanics concepts and applications. 2 hrs. lab (CR: PHY 201 or PHY 211)
  - This lab course emphasizes physical concepts, over techniques of measurement and analysis, so is intended for Natural Science majors. It is a pre-requisite for Physics II and Physics II Lab. (for less math but faster pace with less depth, consider Phy.101 or PS 122 surveys)
- Required workbook: Phy 202 Laboratory Manual by MU Physics Dep't, (Van Griner, 2017) calculator: non-programmable, with buttons (not menu) for EE or EXP,  $x^2$ ,  $\sqrt{x}$ , cos, sin-1 pen and pencil; pen for predictions, pencil is okay for data, calculations, and computation attendance: (with pen, pencil, calculator, lab manual) at each class meeting, ready to learn time & effort: outside of class, 1 or 2 effective hours/week to write discussion & conclusions
- <u>Recommended:</u> a positive attitude ... to embed these concepts deeply, not waste your time. <u>pre</u>paration ... some labs (esp. 2<sup>nd</sup> half) might be done <u>before</u> topics are covered in Lecture. cooperation with lab partners ... best way to learn is to teach, best instruction is by peers. balance ... between struggling to understand (yourself) , and asking when you don't.
- Overview: Phy.202 is a hands-on "guided investigation" thru a few classic scenarios in kinematics & dynamics, oscillations & waves, and thermal phenomena. You'll do activities and copy data from the computer screen, by hand in order to 1) recognize essential data features, 2) practice the effect-to-cause abstracting process, 3) explicitly ignore unnatural results. You'll thoughtfully describe, explain, and evaluate your results, to connect them to Physical theory. 202 labs concentrate on the most basic foundations, to make sure they are solidly understood many lecture topics are ignored here so doing well in Lab is necessary, not sufficient, for 201.
- Most work is to be done in-class. Predictions are to be yours, made solo; then discuss them with lab partners (typically trios). Data and results arise from cooperative effort switch roles often among set-up, manipulation, and mouse-running. Trust your lab partners skeptically. Verify! (redundancy will avoid most blunders) Try to reach consensus on explanations but be picky! You're trying to teach these lab partners how to think about physics!

Much of each lab's <u>Learning occurs</u> while writing your conclusion. Write it by yourself (solo), outside of class, isolated from discussions with others about what "ought to be concluded". In the conclusion: <u>mention</u> what the lab was trying to demonstrate, <u>summarize</u> the results that your team obtained, <u>comment</u> on whether they are what *ought to be expected* based on theory, and either suggest <u>why</u> they are not, or <u>what measurements</u> make you most uncertain that they are (as expected). Multi-variable propagation of measurement uncertainties is overkill.

Much of each lab's <u>Report Score</u> is based on home-work (textbook) style calculation questions, that are related to the lab topic; these <u>may</u> be discussed with others, but <u>only using words!</u> (no talking about numbers, or letter abbreviations, or math symbols – that's cheating).

Staple your Homework and Conclusion that lab's Worksheet set (including graphs, if asked for), and turn in the entire report at the <u>beginning</u> of the next lab meeting.

<u>Do</u> include your lab partners' names on the first page ("L.P: Jane D & Joe S")

You will receive the graded report at the next lab meeting – yes, 2 weeks after doing the lab.

Lab 12 will be rapid turnaround: email to me a scan or photo of your report by Mon.Apr.23.

Department policy requires 2 lab exams; nothing on the exams is to be discussed with others. MY Exams will not be homework-style; they will include a hands-on "practical" portion.

<u>Grade Components</u>: 12 Lab Reports × 5% each = 60 % 2 Lab Exams × 20% each = 40 %

<u>Letter Scale</u>: 100% > A > 90% > B > 80% > C > 70% > D > 60% > F ...

with the <u>additional condition</u> that you must pass (>60%) at least 1 Exam to pass the course, and the <u>additional condition</u> that you must have completed (done & written) at least 9 labs.

date	lab # , title	
Jan.12	0 (handout) , Force Table Intro to vectors	
Jan.19	1 , Introduction to Motion	
Jan.26	2 , Accelerated Motion	
Feb.02	3, Mathematical Description of Motion	
Feb.09	4 , Projectile Motion	
Feb.16	5 , Force and Motion	
Feb.23	6 , Circular Motion	
Mar.02	7, Work and Energy	
Mar.09	8 , Collisions	
Mar.16	Exam 1, including Labs 1 - 6 (but not Lab 7)	
Mar.23	- No meeting - Spring Break -	
Mar.30	9 , Simple Harmonic Motion	
Apr.06	10, Periodic Motion of a Pendulum and Sound	
Apr.13	11, Longitudinal Waves	
Apr.20	12, Temperature and Heat - email me a pic, by Mon!	
Apr.27	Exam 2, including Labs 7 – 12	

Some Student Learning Outcomes: based on the Attributes of Core II Physical & Natural Science

Student Learning Outcome	Practiced	Assessed
based on observation & measurement	each lab in workbook	conclusions, exams
control, manipulate, & measure via devices	each lab performance	exams
collect & analyze data, notice uncertainties	each lab in workbook	conclusions, exams
form hypotheses & design experimental tests	most labs performance	conclusions, exams
interpret & communicate results	each lab in workbook	exams
validity from calibration, precision, accuracy	each lab performance	exams
uncontrolled variables muddle interpretation	some lab performance	conclusions, exams
basic principles of equipment design & use	most lab performance	exams
explanation relates to concept via math logic	some labs in workbook	homework, exams
reasoning with correct vocabulary	each lab in workbook	conclusions, exams
numerical predictions of observable quantity	each lab in workbook	homework, exams

As you can see from the above table, the Exams are more important than any one Conclusion – so treat the conclusions as practice thinking (deeply about the experiment) before the Exams!

## Statements that are valid for ALL Classes at Marshall:

These are printed in your MU catalog – the most recent version is on-line; the top line at http://www.marshall.edu/catalog/undergraduate-catalogs/

- + Academic Dishonesty Policy: progress in science is founded on honesty and openness
- no lying, no cheating, no stealing (plagiarism) zero tolerance!
- + Computing Services Acceptable Use Policy: don't "lend" your account, or send spam from it, or solicit from it ... remember to LOG OUT before leaving the Lab!
- + Incomplete Grade Policy: to receive an "I", you must have completed ¾ of the course successfully (*i.e*, passing); course work must be completed within 1 semester (*i.e*, by Dec.`18)
- + Students with Disability Policy: the student initiates procedures to document a disability, then request accommodations, thru the Office of Disability Services (Prichard 117).
- + Inclement Weather Policy: don't over-risk your safety to get to class
